

EMPOWERING THE PARTNERSHIP OF GOVERNMENT AND CITIZENS

Overview

The emGovPower REVENUE application completely manages the open item receivables needs for all departments within your government. Accounts are shared amongst the departments, with security controls on edits and updates, to show a complete picture of the organization's interaction with the government. One time invoicing is supported, along with regular invoices and invoices dependent on return information from the customer. As with other emGovPower applications, the Revenue module is fully integrated with the cashiering application, the accounting applications and the Citizen Web.

Differentiating Functionality

- Manages all interactions between the customer and the government
- Shared by appropriate departments within the government
- Complete history of all billing, payments, penalties, adjustments and failures-to-file
- Yearly creation of recurring invoices
- User defined reporting allows access to all information without programming assistance
- Financial transactions are automatically accumulated
- Very flexible definition of bill/return types supports the changing needs of the government
- Interfaced to GIS systems (if available)
- Email notifications
- Letter writer integrated into right-click menu functions
- Interfaced to Citizen Web for return entry and status reporting

Business Benefits

- Centralized control over all aspects of the customer's interaction with the revenue of the government
- All details of all transactions maintained to ease audit and management
- Seamless integration with cashiering, accounting, permitting and Citizen Web reduce errors in transcription of data
- Citizens can easily pay all of their outstanding invoices, in person, by mail, or over the internet
- Method for creating copies of invoices available in person or online to ease customer service workload
- Returns (Sales Tax, Room and Meal Tax, Occupational Tax, Business License, etc) can be entered online over a secure connection to facilitate faster payment and processing
